EXPERIENCE

Frontend Engineer, LeafLink

June 2021 - August 2025

Develop a B2B marketplace ecosystem offering a streamlined approach to cannabis e-commerce for thousands of businesses nationwide.

Collaborated closely with the Product team in exploring e-commerce solutions for both seller and retailer users based on daily use cases.

Features developed on the seller side include promo codes and volume discounts for inventory items, contributing to over \$1M in transactions within a month of release, all while incentivizing increases in sales and orders.

Features developed on the retailer side include a dashboard that offers business insights to the buyer, such as featured brands, frequently purchased products, and order history, resulting in a more streamlined process for repurchasing and brand discovery.

Regularly modernized pages and components on the platform, originally written using Django templates, to Vue components, allowing for full use of Typescript, Pinia for type-safe state management, GraphQL for seamless data querying, and Tailwind for styling.

Additional revenue-generating features include integrating multiple ad-related third-party services to provide an easy ad placement solution for brands seeking to expand their reach on the platform.

Frequently contributed to LeafLink's component library used throughout the platform and by every engineering team.

All features were developed with a testing-first mindset, clad with a full suite of unit tests.

EXPERIENCE

Applications Developer, Marsh McLennan

June 2019 - June 2021

Built and delivered SharePoint Online web parts used by colleagues company-wide, utilizing the SPFx framework and React.

Developed a mobile application using React Native to assist colleagues with finding conference rooms.

Actively contributed to a modernization project involving switching from SharePoint 2013 to SharePoint Online. This involved redeveloping components written in jQuery and classic JavaScript to React components.

Intern, Marsh McLennan

June 2017 - June 2019

Developed for a wide variety of projects while pursuing a full engineering course-load.

Coached and onboarded employees from around the world to our no-code page-building platform to democratize team landing page development.

EDUCATION

Stevens Institute of Technology

B.E. Software Engineering | May 2019

SKILLS

VueJS
ReactJS/React Native
Javascript/Typescript
HTML5/CSS3/Sass/Tailwind
GraphQL
Python/Django
PHP

English - Fluent/Native
Arabic - Fluent/Native
Spanish - Conversational
